Marc,

There is no problem with applying heat per BHT-412-MM-5 (heat gun with 180F / 82C max).

RE: customer request for removing 412 support with heat as per Bell instructions

Just some thoughts:

Heat could affect the temper of the tube and support. But it wouldn't affect it any more than a Bell tube. If it was controlled and kept far below the tempering temperature then it shouldn't affect anything.

I know that Magnobond can be hard to remove. We're now using Scotch Weld DP460, but I don't recall how it compares when it comes to removal. We can talk to landing gear, as I'm sure they have some experience in removing it.

Perhaps Dan could try removing a support with heat to see if it helps.

Ultimately David would have to approve the use of heat. I assume we'd want to provide an instruction with a max allowable temperature.
